

Energy Saving & Efficiency Solutions (Cogeneration)

Unlock potential gains from green energy conservation initiative

COMPLIMENTARY EVENT FOR FMM MEMBERS

Is cogeneration viable for your factory?

- Does your plant consume high electrical power, heat (steam and hot water) and chilled water?
- Are you concerned over the impact of current & future energy consumption and costs on competitiveness?
- Do you anticipate plant expansion in the near future?

Join us for a one-day educational session to further evaluate the potential, profitability and technical aspects of cogeneration.

DATE

MARCH 30, 2017, THURSDAY

WHAT IS COGENERATION?

Cogeneration or **Combined Heat and Power (CHP)** is the production of heat and electric power simultaneously from a single plant, either turbine or gas engine. Cogeneration is a highly efficient form of energy conversion and can achieve primary energy savings of approximately 40% compared to the supply of electricity and heat from conventional power stations and boilers. Cogeneration has a proven track record of RM1.4 million savings per year based on 1 Mega Watt electrical consumption.

It is a green energy conservation technology supported by the Malaysian Investment Development Authority.

Benefits include:

- Investment Tax Allowance (ITA) from MIDA
- High efficiency in energy use
- Improving plant reliability
- Low emission & environmental friendly
- Energy savings in production

WHO SHOULD ATTEND?

- CEOs, Managing Directors
- Business Owners
- Engineers
- Production /Factory Managers
